

## UAV Show 2021 Publication

Within the framework of the PRAETORIAN\* project (*ndlr: a project whose strategic objective is to increase the security and resilience of European critical infrastructures by facilitating the coordinated protection of these interdependent infrastructures against combined physical and cyber threats*), the EDF R&D project team participated in the UAV Show's 6th edition, which was held in Bordeaux from October 18 to 20, 2021. This is an essential meeting, bringing together the leading companies in this industry to share their experiences and knowledge through a set of round tables, workshops and conferences.

Along with the DTG and its Drone Competence Center represented by Marion FLORET as well as the EDF Aquitaine Regional Management represented by Emilie MERCIER, this was an opportunity for us to present the project, to welcome and discuss the solutions proposed by innovative companies that can meet our requirements in terms of monitoring, operating safety and digital security specific to the different critical infrastructures identified in this project.

## Protection of Critical Infrastructures from advanced combined cyber and physical threats

This participation ended with a workshop focusing on the PRAETORIAN project, led by Mr. Frédéric Guyomard - Engineer and Researcher in cybersecurity of industrial systems and Director of the project. Then, it was followed by a round table discussion focused on an open and crossed reflection on the "digital security" theme of the project with a panel of experts in the field of cyber resilience\*\*. A session

to discuss the main challenges of the industry and to identify any future areas of collaboration.

## Protection of Critical Infrastructures from advanced combined cyber and physical threats

The event hosted a drone demonstration during an evening show showcasing the birth of our galaxy and the birth of humanity. It ended with a guided tour for our European partners of the Bordeaux quays and its water mirror facing the Bourse square.
